LinkedIn: <https://www.linkedin.com/in/anwasha-bose-0924782b9>

Analytical and detail-oriented AI / ML Engineer with hands-on experience in creating stunning applications like Chatbots, RAGs, with LLM Models. Proficient in solving complex workflows with Multi Agent. Have strong foundation on Math & Stats, Python, ML and DL and strive to solve complex problems.

Professional Experience

Edunet Foundation - AICTE - Hosted by Microsoft

04/2025 - 05/2025

Machine Learning Intern

- Created Disease Prediction system that can predict disease from given symptoms. Built small-scale ML models such as Linear Regression, Decision Tree, and Random Forest for real-world datasets. Collaborated on projects implementing supervised and unsupervised learning models.

Prodigy InfoTech - AICTE

05/2025 - 06/2025

Machine Learning Intern

- Created a Cat Dog Classification System using Python, Streamlit. Improved system accuracy and optimized performance through query refinement.

Education

Calcutta University

08/2022 - 07/2024

Bachelors of Science in Economics - 7.133

UP Public School, Suri, Birbhum

04/2019 - 03/2021

Higher Secondary Examination - 8.40

DAV Public School, Dubrajpur, Birbhum

04/2009 - 03/2019

Secondary Examination - 9.44

Projects

Agentic AI News Summarizer

- Technologies: Python, LangGraph, Tavily API, Streamlit, LangChain, Groq APIs
- Developed a multi-agent GenAI application that autonomously gathers and summarizes current news using LangGraph for workflow prompt chaining. Implemented modular agent design for data retrieval (Tavily), content summarization (LLM-based), and presentation (Streamlit).

RAG-based Agentic AI Chatbot

- Technologies: Python, LangChain, FAISS, Streamlit, LLM
- Developed an intelligent Retrieval-Augmented Generation (RAG) chatbot capable of answering user queries from uploaded PDF or any Link with contextual accuracy using GPT-OSS Model. Integrated document parsing, vector embedding, and retrieval pipelines mimicking ChatGPT-style interactions.

Generative AI Language Translator

- Technologies: Langchain, Streamlit, Flask, HTML, LLM, Groq
- Built a Generative AI-powered multilingual translation system capable of translating text inputs between various languages in real time mimicking Google Translator. Integrated LLMs (e.g. Groq GPT-OSS) with LangChain for prompt and translation accuracy.

Used Car Price Prediction App

- Technologies: Python, Pandas, NumPy, Seaborn/Matplotlib
- Designed and deployed a regression-based ML model to estimate used car prices from structured datasets. Conducted EDA, data cleaning, and model training with hyperparameter tuning to enhance predictive performance.

Certifications

- Complete Agentic AI Bootcamp with LangGraph and LangChain - Udemy - [ude.my/UC-a63d18c9-e056-4ff3-b7d0-eca273b27ba9](https://www.udemy.com/course/uc-a63d18c9-e056-4ff3-b7d0-eca273b27ba9/)
- Complete Generative AI Bootcamp with LangChain and HuggingFace - Udemy - [ude.my/UC-37676882-55f8-45f4-8314-68e81667a884](https://www.udemy.com/course/uc-37676882-55f8-45f4-8314-68e81667a884/)
- Complete Data Science and Machine learning Deep Learning NLP Bootcamp - Udemy - [ude.my/UC-ba2023b6-fb5d-4c41-b1f6-307ff0cf78e8](https://www.udemy.com/course/uc-ba2023b6-fb5d-4c41-b1f6-307ff0cf78e8/)
- Artificial Intelligence and Machine Learning - Aptech Learning

Key Skills

- Programming: Python, SQL, R (Basic), HTML, Flask
- Machine Learning: Regression, Classification, Clustering, Model Training & Evaluation
- Deep Learning: ANN, CNN, RNN, LSTM, Transformers
- Generative AI & Agentic AI: LangChain, Hugging Face Transformers, Prompt Engineering (GPT)
- Frameworks & Tools: TensorFlow, Keras, PyTorch, Scikit-learn, Pandas, NumPy
- Visualization: Matplotlib, Seaborn
- Deployment: GitHub, Docker, Streamlit
