

Anwisha Bose

Software & AI Engineer Intern

+91-9907441145 | anwisha.bose2021@gmail.com | Kolkata, INDIA | Experience: 0 Year 6 Months

Analytical and detail-oriented AI/ML Engineer with hands-on experience in developing advanced applications such as chatbots, Retrieval-Augmented Generation (RAG) systems, and multi-agent workflows leveraging large language models (LLMs). Proficient in Python, machine learning, deep learning, and statistical analysis with a strong foundation in mathematics. Additionally, experienced Software Engineer adept in front-end (Web Development) using React.js, delivering responsive and user-friendly interfaces. Committed to solving challenging problems through innovative **AI and software engineering** techniques.

SKILLS

- HTML
- Natural Language Processing
- Retrieval Augmented Generation
- Azure Functions
- TypeScript
- Agentic Ai
- Seaborn
- Python
- Chatbot
- SQL
- generative ai
- Visual Studio Code
- React.js
- Javascript

CERTIFICATION

- Complete Agentic AI Bootcamp with LangGraph and LangChain
- Complete Generative AI Bootcamp with LangChain and HuggingFace
- Complete Data Science and Machine learning Deep Learning NLP Bootcamp

WORK EXPERIENCE

Software & AI Engineer Intern - Netwoven India Pvt. Ltd

Dec 2025 - Present

Contributing to the BizApps (Business Applications) team at Netwoven. Developing and automating enterprise-level solutions using Python, React, and AI architectural frameworks. Responsible for optimizing data workflows between cloud databases and front-end applications while implementing AI-driven querying systems. This department perfectly explains your focus on Power Automate, Azure, and AI integration.

INTERNSHIPS

Automated Tax Increment Financing (TIF) Analyzer, Netwoven India Pvt. Ltd

104 Days

Developed a specialized financial tool designed to calculate real-time fiscal projections for Tax Increment Financing (TIF) districts. The application automates complex tax calculations, enabling users to determine revenue growth and surplus distributions instantly based on variable input fields.

Financial Engine: Built a robust calculation logic to process base values, tax rates, and incremental growth to output Total Revenue and Annual Surplus.

Dynamic UI: Implemented a reactive form-driven interface using React functional components and Hooks (useState, useEffect) for real-time data updates without page reloads.

User Experience: Designed a clean, professional dashboard focused on data readability for financial analysts and urban planners.

Agentic AI News Summarizer, Prodigy InfoTech

31 Days

Developed a multi-agent GenAI application that autonomously gathers and summarizes current news using LangGraph for workflow prompt chaining. Implemented modular agent design for data retrieval (Tavily), content summarization (LLM-based), and presentation (Streamlit).

Technologies: Python, LangGraph, Tavily API, Streamlit, LangChain, Groq APIs

RAG-based Agentic AI Chatbot, Edunet Foundation

30 Days

Developed an intelligent Retrieval-Augmented Generation (RAG) chatbot capable of answering user queries from uploaded PDF or any Link with contextual accuracy using GPT-OSS Model. Integrated document parsing, vector embedding, and retrieval pipelines mimicking ChatGPT-style interactions.

Technologies: Python, LangChain, FAISS, Streamlit, LLM

PROJECTS

Automated Predictive Catering Analytics & Reporting

7 Days

Key Skills: Power Automate, Excel (Power Query), Data Analytics, Predictive Logic, Workflow Automation.

Project Description: Designed and deployed an end-to-end automation workflow to optimize office resource management and food waste reduction through predictive data analysis.

Data Aggregation: Automated the extraction of 5 months of historical meal preference data (Veg vs. Non-Veg) from Excel, specifically filtering for peak office days (Mondays and Fridays).

Predictive Calculation: Developed a logic-based engine within Power Automate to calculate rolling averages and trend distributions to forecast future meal requirements.

Scheduled Triggers: Implemented conditional scheduling to ensure stakeholders receive predictive reports exactly 24 hours in advance (Sundays and Thursdays), enabling proactive procurement.

Generative AI Language Translator

2 Days

Built a Generative AI-powered multilingual translation system capable of translating text inputs between various languages in real time mimicking Google Translator. Integrated LLMs (e.g. Groq GPT-OSS) with LangChain for prompt and translation accuracy.

Technologies: Langchain, Streamlit, Flask, HTML, LLM, Groq

EDUCATION

2024

B.Sc - Bachelor of Science |
Statistics
Calcutta University
Grade - 7.14/10

2020

12th
CBSE, English
Marks - 82.0%

2019

10th
CBSE, English
Marks -
89.0%

ADDITIONAL INFORMATION

Languages: English, Hindi, Bengali
